

Amendment to the Claims:

Without prejudice, this listing of the claims replaces all prior versions and listings of the claims in the present application:

Listing of Claims:

1. (Previously Presented) A device for receiving data via radio signals in a motor vehicle, comprising:

- an input device;
- a radio receiver for receiving data;
- a processor for processing the data;
- a memory; and
- a display for displaying the processed data,

wherein the input device, when operated once, in the event of a fault, puts the device in a state defined in the memory for playing back the data, and

wherein the fault includes at least one of a failure of a service to respond, a failure in data reception, lack of device compatibility, a software fault, an operating system fault, and a memory fault.

2. (Original) The device according to claim 1, wherein the input device includes at least one pushbutton on the device.

3. (Original) The device according to claim 1, wherein the input device includes a remote control.

4. (Original) The device according to claim 1, wherein the input device includes a microphone.

5. (Original) The device according to claim 1, wherein the state leads to the display of selection options, one of which is to be selected.

6. (Original) The device according to claim 5, wherein the selection options include:
- a first selection option to resume data reception from a service;
 - a second selection option to resume a service used previously;
 - a third selection option to return to a selected portal of a service provider; and
 - a fourth selection option to restart the device.

7. (Original) The device according to claim 6, wherein the portal is stipulated by a user of the device.

8. (Original) The device according to claim 6, wherein the portal is stipulated in the device.

9. (Original) The device according to claim 6, wherein the restart is performed through software.

10. (Original) The device according to claim 6, wherein the restart is performed through hardware.

11. (Original) The device according to claim 2, wherein the pushbutton causes various states of the device after operation for different periods of time.

Claim 12. (Canceled).

13. (Previously Presented) The device according to claim 1, wherein the radio signals include at least one of Digital Audio Broadcasting signals, Digital Video Broadcasting signals, and Digital Radio Mondial signals.

14. (Previously Presented) The device according to claim 1, wherein the data includes at least one of a web page, a video data stream, an image, a graphic, text, and animation.

15. (Previously Presented) The device according to claim 1, wherein the input device includes an infrared transceiver device.

16. (Previously Presented) The device according to claim 1, wherein the processor is configured to perform decoding and reformatting of the data.

17. (New) The device according to claim 1, wherein the input device, when operated once, in the event of the fault, restarts the device.

18. (New) The device according to claim 1, wherein the state defined in the memory for playing back the data is, within a navigation sequence, prior to a state of the device at the event of the fault.
